2757 – A well made, deep sided Felt bull with a nice muscle pattern, eye pigment and a big hind quarter. A low birth weight, high growth bull with lots of milk and high \$ figures. Dam is a **two year old Wrangler 15 cow with a milk EPD of +29.**

Rausch Herefords Bull & Female Sale

Crop Mate to the Two Year Old Bulls in the Sale

Jake Baumgarten, Belfield, ND

showed a crop mate to the two-year-old bull offering.

Record as follows:

- Over All Breed Champion at Major Brown County Fair
- (First Hereford in decades to accomplish this)
- Champion Steer - ND Jr. Hereford Field Day
- Champion Steer - Roughrider Days Fair & Expo
- Champion Steer - Bowman County Fair
- Second in Class to Champion Steer at
- Jr. National Hereford Show in Denver

Several Heifer and Steer crop mates

won other shows -

see www.RauschHerefords.com

Glossary of Performance Terms

- BW** Actual birth weight of animal.
- SC** Current scrotal measurement.
- WDA** Weight gain per day since birth.
- Sale Weight** Weight of animal at catalog printing time plus average pounds per day to date.

“EPD’s” - Expected Progeny Difference that an animal has as compared to the breed average.

- CED EPD** Reported calving ease on an animal’s direct offspring and on his ancestor’s direct offspring.
- CEM EPD** Reported calving ease that an animal’s daughters display.
- BW EPD** Birth weight of animal’s progeny expected difference as compared to the breed average.
- MILK EPD** Weight difference of offspring from daughters of animal when compared to their contemporary group.
- SC EPD** Scrotal size difference expected on offspring of an animal when compared to breed average.
- WW EPD** Weaning weight difference expected on offspring of an animal when compared to breed average.
- YW EPD** Yearling weight difference expected on offspring of an animal when compared to breed average.
- FAT EPD** Back fat difference expected on offspring of an animal when compared to breed average.
- REA EPD** Rib eye area difference expected on offspring of an animal when compared to breed average.
- IMF EPD** Intramuscular fat difference expected on offspring of an animal when compared to breed average.
- BMI Index** Selected and weighted traits of an animal that best compliment the Angus breed average traits.
- CEZ Index** Selected and weighted traits of an animal that reflect the animal’s calving ease potential.
- CHB Index** Selected and weighted traits of an animal that reflect the animal’s feedlot and carcass profit potential.
- Total Index** Total of indexes that affect your bottom line.

Because of data collected on animals in a pedigree EPD’s & \$ Indexes are superior to an animal’s actual measurements in predicting an animal’s genetic ability.

On January 1st and July 1st of each year the entire data base of the American Hereford Association is updated for producers. The mammoth computers take into consideration the relatives of each animal’s performance information and do countless calculations when updating each animal in the database.

You can find more detailed information on each of the performance measurements in the preface of the Sire Summary of the Hereford Breed.

This Scene Occurs 20-25 Times Per Day Each April

4th Generation Sorting

Temperament is important to all generations here at Rausch Herefords.
